Continuation of 11. does NOT place the application in condition for allowance because: In response to applicant's argument that Yamamoto et al. fail to disclose a copolymer that exhibits a welling degree of 4 or below in an electrolyte obtained by dissolving LiPF.sub.6 in the concentration of 1mol/liter into a solvent of 1:2 (volume ratio at 20C) mixture of ethylene carbonate and diethyl carbonate, Yamamoto et al. teaches the same copolymer desired by the applicant, methylmethaacrylate and fumaric acid (col. 4 line 48 and col. 5 line 6) and an electrolyte obtained by dissolving LiPF.sub.6 in the concentration of 1mol/liter into a solvent of 1:2 (volume ratio at 20C) mixture of ethylene carbonate and diethyl carbonate (col. 16 line 35-40), it is inherent that that the copolymer exhibits a swelling degree of 4 or below. Furthermore, Yamamoto teaches the same method in which the copolymer exhibits a swelling degree of 4 or below in an electrolyte on col. 16 lines 35-40.

The declaration under 37 CFR 1.132 filed 8/18/08 is insufficient to overcome the rejection of claims 1-12 based upon 35 U.S.C. 102(b) rejections anticipated by Yamamoto et al. as set forth in the last Office action because: First of all, a declaration can not be used to overcome a 102(b) rejection. Secondly, the examples shown in the declaration do not use the same materials as in applicant's present invention therefore can not be compared accurately. Of course different material provide different swelling property, however Yamamoto discloses the same materials desired by the applicant for the copolymer and electrolyte, therefore would inherently have a swelling degree of 4 or below

In response to applicant's argument that Yamamoto et al. is not prior art, Yamamoto et al. has a PCT Publication No. WO0045452 which was published on Aug 3,2000, which is the date used as the 102(b) date rejection. Yamamoto et al. 6756153 is used as the English translation for WO0045452.
